Pharmacists are an essential part of the health care team. On the front lines of dispensing opioid pain medications and providing medication-related services, pharmacists can serve as a first line of defense by engaging in prevention and treatment efforts of opioid use disorder and overdose.

Sales of prescription opioids in the U.S. nearly QUADRUPLED from 1999 to 2014, but the amount of pain Americans reported remained UNCHANGED.

**Tips for Communicating with Patients**
- Ask open-ended questions
- Be empathetic
- Use active listening
- Use clear explanations—avoid jargon
- Include verbal and written materials

**Simple Ways to Start Conversation**
- What medications are you taking?
- What medications have you taken to manage pain and how did you respond?
- Describe how you normally take your medications.
- How well is your medication controlling your pain?
- Are you experiencing any side effects from your pain medications?
- In addition to medications, what other ways are you managing your pain?
- Do you know which medications you should avoid while taking opioids?
- What questions do you have about your medications?

**Resources and Education**
- American Pharmacists Association: [www.pharmacist.com](http://www.pharmacist.com/)
- CDC Injury Prevention and Control Opioid Overdose: [www.cdc.gov/drugoverdose/](http://www.cdc.gov/drugoverdose/)
- Substance Abuse and Mental Health Services Administration: [www.samhsa.gov](http://www.samhsa.gov)
- PDMP Resource: [www.namsdl.org/prescription-monitoring-programs.cfm](http://www.namsdl.org/prescription-monitoring-programs.cfm)

As many as 1 in 4 patients receiving long-term opioid therapy in a primary care setting struggles with addiction.

OVERDOSE DEATHS

Involving prescription opioids have quadrupled since 1999.
In 2014, Nearly 2M Americans aged 12 or older, either abused or were dependent on opioids.

**Verify.** Validate prescriber DEA registration and patient identification.

**Consult.** If available, check prescription drug monitoring program (PDMP) as well as patient records.

**Communicate.** Contact the prescriber with questions or concerns, talk to the patient, and submit information to the PDMP, if available.

**Communicating with Patients**

In addition to increasing communication with prescribers, pharmacists talk to patients about the safe use of opioids. Pharmacists can educate patients about:

1. **Proper use:** Discuss how to take medication(s) exactly as prescribed and the risks of using medication inappropriately.

2. **Side effects:** Review most common side effects and stress the importance of reporting them to their prescriber or pharmacist for effective management.

3. **Medication fills:** Discuss and manage expectations regarding refill requirements and the importance of using one pharmacy for all medications.

4. **Stockpiling medication:** Counsel patients about the dangers of saving unused medication.

5. **Safe storage and disposal:** Explain how to safely store and dispose of unused medications to prevent diversion or misuse. Refer to the DEA website www.deadiversion.usdoj.gov/drug_disposal/ for fact sheets and details regarding drug disposal.
